FAULT TOLERANT COMPUTING NODE HAVING MULTIPLE HOST CHANNEL ADAPTERS

ABSTRACT OF THE DISCLOSURE

A computing node configured for communications on an InfiniBandTM network includes at least two host channel adapters configured for communications on the InfiniBandTM network, and at least one processor configured for controlling the communications of the two host channel adapters on the InfiniBandTM network. The host channel adapters communicate with the processor via an internal bus. The processor monitors communication operations by the host channel adapters on the InfiniBandTM network. If the processor detects that one of the host channel adapters is unable to complete the corresponding communication operations, the processor outputs a message requesting traffic destined to the one host channel adapter to be redirected to the remaining host channel adapter.
